

## PFIZER LIVESTOCK VACCINES CAN NOW BE USED UP TO 30 DAYS AFTER OPENING!

Thanks to on-going livestock vaccine development programs, Pfizer Animal Health produces the **ONLY** vaccines on the Australian market that can continue to be used for up to 30 days after opening.

These vaccines include:

CATTLE	SHEEP	PIGS
Ultravac® 7in1	The Glanvac® Range	Porcine Parvac®
Ultravac® 5in1	Eryvac®	Lepto Eryvac®
Leptoshield®	Ultravac® 5in1	Neovac®
Pestigard®		Eryvac®

Reduced efficacy, failure of sterility and accelerated vaccine breakdown have been reasons that vaccines were directed for discard 24 hours after opening. Continuing research, development and testing of vaccines by Pfizer Animal Health confirms that, as long as storage guidelines are followed, the above listed vaccines can be used with confidence for 30 days after opening.

### The new 30 day claim means to your customers:

- Greater convenience
- Less vaccine wastage

### The new 30 day claim means to you:

- The ability to give your customer better value
- The chance to offer your customers a truly premium vaccine range

Pfizer Animal Health - leading the way in vaccine technology and customer focused innovations.
